SUMMARY

PhD researcher in Computer Science and Software Engineer specializing in Large Language Models, AI Agents, and applied AI systems. Experienced in building end-to-end software solutions and conducting hands-on experimentation with PyTorch, Hugging Face, LangChain, and RAG pipelines. Technical writer and internal trainer who enjoys turning complex AI concepts into clear, practical explanations.

PROFESSIONAL EXPERIENCE

HUAWEI TURKEY R&D CENTER, Ankara, Türkiye

Nov 2024 – May 2026

Software Engineer

- Developed and tested enterprise CRM applications within Huawei Turkey R&D.
- Contributed to NBI, a telecommunications monitoring platform, by resolving frontend issues and supporting testing activities.
- Performed black-box and horizontal security testing in cybersecurity projects using Burp Suite and Acunetix.
- Delivered internal technical trainings on Large Language Models, Llama 3.1 fine-tuning, and blockchain technologies.
- Contributed to an award-winning project recognized with the Excellent Project Operation Award.

TURKCELL GLOBAL BILGI, Istanbul, Türkiye

Software Tester

- Applications tested like BiP, fizy, TV+, lifebox, Paycell, Yaani, and YaaniMail.
- Reported issues using Jira Software.

ARGISTO, ESOGÜ Teknokent, Eskişehir, Türkiye

Intern

- Developed a Customer Relationship Management (CRM) project with team.
- Utilized C#, ASP.NET MVC, and Entity Framework technologies.

EDUCATION

Eskişehir Osmangazi University, Eskişehir, Türkiye

Graduation: 2028

- Doctor of Philosophy in Computer Sciences Student, GPA: 3.80
- Research Areas: Artificial Intelligence, Large Language Models, AI Agents, Agentic AI.

Eskişehir Osmangazi University, Eskişehir, Türkiye

Graduation: 2023

- Master of Science in Computer Sciences, GPA: 3.64
- [GitHub Repository](#) for Project and [Master of Science Thesis](#) (National Thesis Center Türkiye).
- Research Areas: Blockchain, Ethereum.

Eskişehir Osmangazi University, Eskişehir, Türkiye

Graduation: 2020

- Bachelor of Science in Mathematics and Computer Sciences.
- Coursework: Data Structures, Algorithms, Computer Architecture, Linear Algebra, Differential Equations.

PUBLICATIONS & MANUSCRIPTS

Başer, N., & Güven, Ö. & Aslan, A.F. (2026). *Verification Framework Proposal for Continuous Documentation in the Age of AI Agents*. Cumhuriyet 17th International Conference on Applied Sciences. (Proposed a three-layer framework -CI/CD consistency checks, Chain-of-Verification between AI agents, and mandatory Human-in-the-Loop review via Pull Requests- to address Verification Debt introduced by AI-generated documentation.)

Başer, N., & Aslan, A.F. (2023). *Developing a Mobile Application That Offers Payment with Ethereum Crypto Currency*. Cumhuriyet 10th International Conference on Applied Sciences, Vol. 10 (Abstract Book), pp. 13–16. ISBN: 978-625-6830-53-0. (Presented an Android (Kotlin) food-ordering application integrated with the MetaMask wallet for decentralized payments on the Ethereum blockchain.)

Başer, N., & Bülbül, B. *Systematic Literature Review on AI Agents in Software Documentation*. Manuscript in preparation.

Başer, N., & Şaan, T.G., & Sivrioğlu, D., & Aslan A.F. *Beyond BLEU: A Mixed-Method Framework for Evaluating AI-Generated Code Documentation with the Javadoc Quality Index*. Manuscript in preparation.

PROJECTS

Systematic Literature Review on AI Agents in Software Documentation

- Companion repository to the work in progress conference paper, surveying the literature on AI agents in software documentation and analyzing emerging risks such as Verification Debt.
- GitHub Repository: github.com/nidabaser/slr-2026-ai-agents-software-documentation

LLM Experimentation & AI Agent Notebooks

- Hands-on experiments with PyTorch, TensorFlow, Hugging Face Transformers, LangChain, LlamaIndex, the OpenAI API, and the Anthropic API, including LLM fine-tuning (Llama 3.1) and Retrieval-Augmented Generation workflows.
- Colab Notebooks: [Notebook 1](#) · [Notebook 2](#)
- Survey GitHub Repository: github.com/nidabaser/indigonix_labs-survey

CRM (Customer Relationship Management) System

- Collaborated with a team of four and led the development of a open-source CRM system.
- Java 21, Spring Boot, PostgreSQL, MapStruct, Lombok, OpenPDF, Swagger.
- GitHub Repository: github.com/nidabaser/CRM_Spring_Boot

Pet Clinic Management System

- REST API for managing veterinary clinic operations.
- Backend Live Demo with SwaggerUI: pet-clinic-management-system.onrender.com/swagger-ui
- GitHub Repository: github.com/nidabaser/Pet_Clinic_Management_System

SKILLS

Software Engineering: Java, Python, Kotlin, C#, JavaScript, Spring Boot, Spring Data, JPA, Hibernate, REST APIs, Microservices Architecture, Dependency Injection, PostgreSQL, MySQL, Docker, Git, Postman, Swagger, Jira, IntelliJ IDEA, Burp Suite, Acunetix, Microsoft Office.

AI / ML: PyTorch, TensorFlow, Hugging Face Transformers, LangChain, LlamaIndex, OpenAI API, Anthropic API, LLM, fine-tuning (Llama, Mistral, Qwen, DeepSeek), Retrieval-Augmented Generation (RAG), Prompt Engineering, AI Agents, Agentic AI.

Languages: Turkish (Native), English (Fluent, [Cambly Certificate](#))

Technical Writing & Community Contributions

Technical writer on Medium at medium.com/@nida.bsr, publishing articles on Artificial Intelligence, Large Language Models, and software engineering. Selected articles:

- [From Vibe Coding to Agentic Engineering: The Shift That Changes Everything](#): a perspective on the transition from prompt-driven coding to agent-based software engineering.
- [Is It Possible to Build Software Without Writing Code? The Harness Engineering Approach](#): an exploration of harness engineering as an emerging paradigm for building software.
- [Transformer Mimarisi: Nokta Çarpımından Attention Mekanizmasına](#) (Turkish): a deep dive into the Transformer architecture, from the dot product to the attention mechanism.
