SUMMARY

MSc Computer Engineer and PhD researcher in Computer Sciences focusing on Large Language Models, AI Agents, and Agentic AI. Software Engineer at Huawei R&D with end-to-end delivery experience across CRM, telecommunications monitoring, and cyber security projects, complemented by published research on AI-agent verification frameworks and blockchain-based mobile applications. Hands-on with PyTorch, TensorFlow, Hugging Face Transformers, LangChain, LlamaIndex, and the OpenAI and Anthropic APIs, including LLM fine-tuning and Retrieval-Augmented Generation workflows. Active technical writer on Medium and internal trainer on LLMs and blockchain technologies, comfortable communicating complex AI and software engineering topics to technical audiences. Fluent in Turkish (native) and English, with strong problem-solving, collaboration, and written communication skills.

PROFESSIONAL EXPERIENCE

HUAWEI TURKEY R&D CENTER, Ankara, Türkiye

November 2024 - Continue

Software Engineer

- As a software engineer, I have been responsible for both development and testing processes within a CRM application team. I have focused on delivering fast, high-quality results while ensuring that the development process remains flexible enough to accommodate evolving requirements. In addition to that, the project received the "Excellent Project Operation Award".
- After the end of CRM project, my next project NBI which is a telecommunication operation monitoring software. I have been responsible for both frontend bugfixes and testing processes within NBI team.
- After the successful delivery of NBI project, ICSL Project started which is main focus on Cyber Security. Focused on horizontal and blackbox security tests using tools like Burpsuite and Acunetix.
- Delivered internal technical trainings on Introduction to Large Language Models (including a hands-on Llama 3.1 fine-tuning walkthrough) and on Blockchain Technologies, sharing practical knowledge with the wider engineering team.

TURKCELL GLOBAL BILGI, Istanbul, Türkiye

July 2020 – September 2020

Software Tester

- Applications tested like BiP, fizy, TV+, lifebox, Paycell, Yaani, and YaaniMail.
- Reported issues using Jira Software.

ARGISTO, ESOĞÜ Teknokent, Eskişehir, Türkiye

July 2019 – September 2019

Intern

- During the internship, developed a Customer Relationship Management (CRM) project with a teammate.
- Utilized C#, ASP.NET MVC, and Entity Framework technologies.

EDUCATION

Eskişehir Osmangazi University, Eskişehir, Türkiye

Expected Graduation year: 2028

- Doctor of Philosophy in Computer Sciences Student, GPA: 3.80
- Research Areas: Artificial Intelligence, Large Language Models, AI Agents, Agentic AI.
- Exams: ALES 72 (2023), YÖKDİL 70 (2019), YÖKDİL 68.5 (2020)

Eskişehir Osmangazi University, Eskişehir, Türkiye

Graduation year: 2023

- Master of Science in Computer Sciences, GPA: 3.64
- [GitHub Repository](#) for Project and [Master of Science Thesis](#) (National Thesis Center Türkiye).

Eskişehir Osmangazi University, Eskişehir, Türkiye

Graduation year: 2020

- Bachelor of Science in Mathematics and Computer Sciences.
- Coursework: Data Structures, Algorithms, Computer Architecture, Linear Algebra, Differential Equations.

Patika+ 3-month Backend Web Development Bootcamp

Graduation year: 2024

- Accepted into and [graduated](#) from one of Turkey's most selective and intense bootcamps.
- Developed REST API projects on Java 17/21, Spring Boot, JPA and PostgreSQL technologies.

Techcareer Android Developer Bootcamp with Kotlin

Graduation year: 2022

- Developed mobile application using Android Studio, MVVM architecture, and Kotlin.
- Access bootcamp final project [GitHub repository](#) and verify bootcamp [Certificate](#)

Graduation year: 2019

TURKCELL Geleceği Yazan Kadınlar

- Android Java Development Program organized by Turkcell in collaboration with TOBB. Verify [Certificate](#)

PUBLICATIONS

- Baßer, N., & Güven, Ö. (2026). **Verification Framework Proposal for Continuous Documentation in the Age of AI Agents**. Cumhuriyet 17th International Conference on Applied Sciences. Proposed a three-layer framework (CI/CD consistency checks, Chain-of-Verification between AI agents, and mandatory Human-in-the-Loop review via Pull Requests) to address Verification Debt introduced by AI-generated documentation.
- Baßer, N. (2023). **Developing a Mobile Application That Offers Payment with Ethereum Crypto Currency**. Cumhuriyet 10th International Conference on Applied Sciences, Vol. 10 (Abstract Book), pp. 13–16. ISBN: 978-625-6830-53-0. Presented an Android (Kotlin) food-ordering application integrated with the MetaMask wallet for decentralized payments on the Ethereum blockchain.

PROJECTS

Systematic Literature Review on AI Agents in Software Documentation

2025 – 2026

- Companion repository to the 2026 conference paper, surveying the literature on AI agents in software documentation and analyzing emerging risks such as Verification Debt.
- GitHub Repository: github.com/nidabaser/slr-2026-ai-agents-software-documentation

LLM Experimentation & AI Agent Notebooks

2024 – Present

- Hands-on experiments with PyTorch, TensorFlow, Hugging Face Transformers, LangChain, LlamaIndex, the OpenAI API, and the Anthropic API, including LLM fine-tuning (Llama 3.1) and Retrieval-Augmented Generation workflows.
- Colab Notebooks: [Notebook 1](#) · [Notebook 2](#)
- Survey GitHub Repository: github.com/nidabaser/indigonix_labs-survey

CRM (Customer Relationship Management) System

July 2024 – In Progress*

- Collaborated with a team of four and led the development of a open-source full-featured CRM system.
- Java 21, Spring (Boot, Data, Security), JWT, PostgreSQL, MapStruct, Lombok, OpenPDF, Swagger.
- GitHub Repository: github.com/nidabaser/CRM_Spring_Boot

Pet Clinic Management System

May 2024 – July 2024

- REST API for managing veterinary clinic operations.
- Backend Live Demo with SwaggerUI: pet-clinic-management-system.onrender.com/swagger-ui
- GitHub Repository: github.com/nidabaser/Pet_Clinic_Management_System

Library Management System

May 2024 – June 2024

- REST API for managing library operations.
- GitHub Repository: github.com/nidabaser/Library_Management_System

Tourism Agency Management System

April 2024 – May 2024

- Java Swing application for managing tourism agency operations.
- GitHub Repository: github.com/nidabaser/Tourism_Agency_Management_System

SKILLS

Programming languages: Java, Python, Kotlin, C#, JavaScript, SQL

AI / Machine Learning: PyTorch, TensorFlow, Hugging Face Transformers, LangChain, LlamaIndex, OpenAI API, Anthropic API, LLM fine-tuning (Llama 3.1), Retrieval-Augmented Generation (RAG), Prompt Engineering, AI Agents.

Backend & Tools: Spring Boot, Spring Data, JPA, Hibernate, REST APIs, Microservices Architecture, Dependency Injection, PostgreSQL, MySQL, Docker, Git, Postman, Swagger, Jira, IntelliJ IDEA, Burp Suite, Acunetix, Microsoft Office.

Languages: Turkish (Native), English (Fluent, YÖKDİL 70, [Cambly Certificate](#))

Resources used for self-learning: Stack Overflow, Udemy, Akın Kaldıroğlu, Engin Demiroğ, Dr. Angela Yu

INTERESTS

Technical writer on Medium at medium.com/@nida.bsr, publishing articles on Artificial Intelligence, Large Language Models, and software engineering. Selected articles:

- [Transformer Mimarisi: Nokta Çarpımından Attention Mekanizmasına](#) (Turkish): a deep dive into the Transformer architecture, from the dot product to the attention mechanism.
- [From Vibe Coding to Agentic Engineering: The Shift That Changes Everything](#): a perspective on the transition from prompt-driven coding to agent-based software engineering.
- [Is It Possible to Build Software Without Writing Code? The Harness Engineering Approach](#): an exploration of harness engineering as an emerging paradigm for building software.
